PROFESSIONAL SUMMARY

Final-year Computer Science & Business Systems student with hands-on experience architecting full-stack and computer-vision applications using Python, Flask, React, Next.js, and PostgreSQL. Skilled across the stack, from REST API design to CI/CD automation, with growing expertise in applied AI and LLM-integrated developer tooling. Seeking a Software Engineer or AI Developer role to build and ship production-grade systems.

EDUCATION

Degree / Institute	Location	Year	CGPA / %
B.E. Computer Science & Business Systems — Dayananda Sagar College of Engineering	Bengaluru, India	2023–2027	8.15 CGPA
Class XII — PCM — Sri Chaitanya PU College	Hyderabad, India	2021–2023	97.00%
Class X — Dream World School	Ballari, India	2020–2021	80.00%

EXPERIENCE

Independent Software Developer — Full Stack & AI Projects

Jan '25 – Present

Personal Development · Bengaluru, India

- Architected and deployed Python-based applications, computer-vision pipelines, and LLM-integrated developer tools using Flask and PostgreSQL, carrying each project from concept through to a working, production-style system.
- Engineered asynchronous telemetry queues and indexed database schemas to support efficient, near real-time data processing.
- Automated CI/CD build and deployment pipelines with GitHub Actions, streamlining releases and reducing manual overhead.

AI Enthusiast & Technical Peer Mentor

Jan '25 – Present

Dayananda Sagar College of Engineering · Bengaluru, India

- Facilitated hands-on workshops on machine learning fundamentals, algorithm design, and clean-coding practices for 40+ engineering peers.
- Mentored student project teams on debugging strategy, database normalization, and milestone planning, helping groups deliver working builds on schedule.

PROJECTS

AI-Powered Code Generator & Debugging System

Jan '26 – Mar '26

Python, Flask, Generative AI, LLMs

- Built a Flask-based developer assistant that flags subtle logic bugs and generates modular code from natural-language prompts via LLM APIs.
- Designed an asynchronous backend pipeline delivering near real-time code-optimization suggestions and automated test scaffolding.

AI Pothole Tagging System

Aug '25 – Nov '25

Python, OpenCV, Computer Vision, Flask

- Developed an automated video-processing pipeline using OpenCV contour analysis and Canny edge detection to detect and severity-tag road potholes in real time.
- Deployed a Flask REST API to cloud infrastructure with an interactive drag-and-drop telemetry dashboard for monitoring detections.

PulseGuard — Uptime & API Health Monitor

Jan '25 – Mar '25

Next.js 15, TypeScript, React 19, SQLite, PostgreSQL

- Built an infrastructure-monitoring platform running multi-frequency HTTP probes with configurable check intervals and latency analytics visualized via Recharts.
- Engineered an auto-recovering incident state machine, edge cron runners, and public status pages backed by SQLite and PostgreSQL.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL (MySQL, SQLite)

Frontend & UI/UX: React.js, Next.js 15, HTML5, CSS3, UI/UX Design

Backend & APIs: Flask, Node.js, RESTful APIs, JSON

DevOps: Git, GitHub Actions (CI/CD)

AI, ML & Data: OpenCV, Pandas, NumPy, Prompt Engineering, Generative AI APIs

Core Fundamentals: Data Structures & Algorithms, OOP, DBMS, Computer Networks

CERTIFICATIONS

- Infosys Springboard — Data Structures & Algorithms, Python, Java, C/C++
- NPTEL — Affective Computing (Machine Emotion Interpretation & HCI Systems)
- Udemy Professional — Corporate Systems Workflow, Enterprise Software Design, Business Strategy
