

K. SUCHIR REDDY

Computer Science & Business Systems Undergraduate

Dayananda Sagar College of Engineering, Kumaraswamy Layout, Bengaluru

ksuchirreddy@gmail.com | +91 7899597757 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Detail-oriented Computer Science & Business Systems student and full-stack software engineer with strong expertise in building scalable web architectures, automated health monitoring systems, and applied AI pipelines. Experienced in designing low-latency REST APIs, time-series telemetry processing, and production database modeling.

ACADEMIC DETAILS

Degree / Qualification	Specialization	Institute	Year	CPI / %
B.E.	Computer Science & Business Systems	Dayananda Sagar College of Engineering, Bengaluru	2023 – Present	8.15
Class XII	Physics, Chemistry, Maths	Sri Chaitanya PU College, Hyderabad	2021 – 2023	97.00%
Class X	SSLC	Dream World School, Ballari	2020 – 2021	80.00%

PROJECTS

- PulseGuard — Uptime & API Health Monitoring System** [Jul '26 – Aug '26]
 - Architected an enterprise-grade full-stack uptime monitoring platform featuring automated multi-frequency HTTP probes, live response latency sparklines (Recharts), and SLA availability reporting.
 - Engineered an auto-recovering incident state machine, edge cron runners, and public shareable status pages backed by zero-config SQLite and production PostgreSQL (Supabase) schemas.
- AI Powered Code Generator and Debugging System** [Jan '26 – Mar '26]
 - Designed a responsive web interface using Flask to help developers locate subtle logic errors and generate modular code structures using Generative AI LLM integrations.
 - Wrote an efficient asynchronous backend processing pipeline that parses user code on the fly, delivering optimization strategies and automated test scaffolding.
- Pothole Tagging & Road Damage System** [Oct '25 – Nov '25]
 - Built an image-processing system with OpenCV that analyzes video clips to spot, categorize, and log road damage anomalies, automating municipal infrastructure inspections.
 - Translated complex spatial data into accessible, interactive dashboards via Power BI to provide municipal teams with visual risk heatmaps.
- AI Comment Toxicity Rewriter** [Jan '25 – Mar '25]
 - Created a deep learning natural language processing pipeline to pinpoint toxic language in text threads and automatically suggest constructive alternatives.
 - Structured a stable, relational MySQL database back-end to safely log interactions and handle concurrent requests with sub-50ms query latency.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript, Python, C, C++, Java, SQL
- Frameworks & Web:** Next.js 15, React 19, Tailwind CSS, Flask, Node.js, Express, REST APIs
- AI & Data:** OpenCV, TensorFlow, Scikit-Learn, Pandas, NumPy, NLP, Prompt Engineering
- Tools & Databases:** PostgreSQL, SQLite, MySQL, Supabase, Git, Docker, AWS S3, Power BI

CERTIFICATIONS & ACHIEVEMENTS

- Completed formal training through NPTEL in **Affective Computing** to understand machine emotion interpretation.
- Built foundational programming strength in core environments (C, C++, Python, Data Structures & Algorithms) through targeted courses on Infosys Springboard.
- Expanded knowledge of corporate analysis, project workflows, and foundational frameworks via professional certifications on Udemy.

POSITIONS OF RESPONSIBILITY

- AI Enthusiast & Peer Mentor** [Jan '25 – Present]
 - Hosted practical study sessions and collaborative reviews with fellow students to simplify software architectures and share clean-coding best practices.

- Guided team discussions around algorithm design and technical problem solving, helping project groups deliver software updates on schedule.
